Rubem P. Mondaini (Ed.)

Trends in Biomathematics: Modeling, Optimization and Computational Problems

Selected works from the BIOMAT Consortium Lectures, Moscow 2017

- Offers peer-reviewed works in mathematical biology that were accepted for the BIOMAT 2017, which was held in Moscow
- Gathers selected papers by researchers from fourteen countries, including the USA, France, Brazil, China, Russia and India
- Includes both comprehensive reviews by senior experts and new results on cutting-edge research
- Topics include problems in biological physics, mathematical biology, biophysics, mathematical methods of applied optimization, and mathematical modelling of biosystems, among others

This book brings together carefully selected, peer-reviewed works on mathematical biology presented at the BIOMAT International Symposium on Mathematical and Computational Biology, which was held at the Institute of Numerical Mathematics, Russian Academy of Sciences, in October 2017, in Moscow. Topics covered include, but are not limited to, the evolution of spatial patterns on metapopulations, problems related to cardiovascular diseases and modeled by boundary control techniques in hemodynamics, algebraic modeling of the genetic code, and multi-step biochemical pathways. Also, new results are presented on topics like pattern recognition of probability distribution of amino acids, somitogenesis through reaction-diffusion models, mathematical modeling of infectious diseases, and many others. Experts, scientific practitioners, graduate students and professionals working in various interdisciplinary fields will find this book a rich resource for research and applications alike.
